8.2 Shared Street Components

Streetscape elements within a shared street should be organized in a way that facilitates navigation by pedestrians with vision disabilities. The defining feature of a shared street is a shared zone where pedestrians, bicyclists, and motor vehicles can safely interact in the same space. If there is sufficient right-of-way, shared streets may also have a pedestrian-only comfort zone.

SHARED STREET

- Pedestrians, cars, cyclists share street space
- Slow speed, low traffic volume
- Curbless
- Incorporate pavers
- Bollards or planters may define pedestrian only zone
